

PumpClub Whitepaper

1. Introduction

Pump club is a project that builds on top of pump.fun to improve the user experience and ease of use. We believe pump.fun was one of the biggest revolutions of the 2024 cycle, it democratizes the way tokens are created on the solana blockchain by allowing anyone to do it with just a few clicks. It allows users to vote on which projects deserve funding with their own wallets and the ones that reach the end of the bonding curve make it to the real world, we truly believe this is what web 3 is about.

It's because we think pump fun is such a great tool that we decided to build on top of it and try to improve it in the ways that we can.

2. Problem statement

Raydium is sometimes slow or doesn't let transactions go through. We all know this, well pump.fun has the same issues, it often doesn't query the data automatically and you have to refresh the website, it doesn't let your transactions go through, etc.

In a world where speed is everything, and where a coin can go from 5k market cap to 20k or more in a matter of seconds, not being able to execute a trade quickly might be the difference between a big gain and a marginal one.

3. Solution overview

The solution for this on Raydium was the use of bots for trading, these bots allow you to perform the actions close to instantaneously and give you a much better UX. For us, that was the obvious solution for the pump.fun problem as well, so we decided to build **the first trading bot for pump.fun**.

Details on how you can use this bot and it's documentation will be provided in and updated version of this document once the bot is live, since we don't want to give you any spoilers, but you will, on top of other things, be able to perform your transactions through a telegram bot.

4. Tokenomics

You might be asking yourselves “If you are providing us with a TG bot, why would we buy your token?”, well that is the beauty of it, by holding our native token \$PUMPCLUB, you will be able to profit from this bot with us. The fees from this token will be used in the following ways:

- 70% : buying \$PUMPCLUB from the market and burning it
- 30% : goes back to the team for marketing and development etc.

In addition, we plan to create a referral program where a user can keep a percentage of the fees from other users he invites to use our bot.

There will be more things coming in the future and the priority will always be to reward the \$PUMPCLUB holders with the profits.

5. Launches

Additionally, we will always be having fun in our telegram group, and about once a week we will make a pump.fun token launch, this will be useful to keep the engagement in our community and for us to be able to have fun together, as always, profits made will be put towards rewarding the holders of our native token \$PUMPCLUB.

6. Roadmap

- \$PUMPCLUB fair launch through pump.fun - done
- \$PUMPCLUB bonding and reaching Raydium - done
- Launch of the trading bot - beginning of April
- Marketing, Marketing, Marketing
- Introduction of our referral program - TBD

7. Conclusion

This project was created a short time ago and there are a lot of things we still have to figure out, but rest assured, we will do anything we can to reward the \$PUMPCLUB holders and keep providing useful products for this space.
